#### **DETAILED ACTION**

#### Status of Claims

1. Claims 1-11 are canceled in view of the preliminary amendment filed 30 March 2006. New claims 12-22 are added in view of the preliminary amendment. Therefore, claims 12-22 are currently under examination.

### **Drawings**

- 2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: Fig. 1 #40 and A.
- 3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: Gas supply line 170 on line 11 of page 5 and inner surface 126 on line 23 of page 5.
- 4. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be

Art Unit: 1793

notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 12-13 is rejected under 35 U.S.C. 102(b) as being anticipated by Jewell et al. US 2,336,017(Jewell).

Jewell teaches a gas discharge apparatus comprising a rotatable hollow shaft having a first end connected to a gas supply and a second end extending upwardly into a container through an opening in the bottom of the container(Fig.; page 2, left column, lines 53 – 70), a driving means for rotating the shaft(Fig. #11; page 2, right column, lines 44-46), wherein in the second end includes a gas discharge nozzle(Fig. #17-18). The rotatable shaft as taught by Jewell further comprises a seal to form a direct sealing engagement with the rotatable shaft and the container(See Fig. "fluid tight bearing").

Regarding claim 12, the gas discharge apparatus as taught by Jewell reads on the claimed gas discharge impeller.

Regarding claim 13, the weight of the hollow shaft and the weight of the other equipment on the shaft, such as motor, pinion, thrust bearing, etc. reads on the claimed means for urging the shaft downwardly against said seal for forming a sealing engagement with the container bottom.

Application/Control Number:

10/506,594 Art Unit: 1793

## Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 12-13 and 22 rejected under 35 U.S.C. 103(a) as being unpatentable over EP 1,127,610 A2(EP'610) in view of Jewell.

EP'610 teaches a gas discharge apparatus comprising a rotatable shaft comprising a drilled hole extending upwardly into a container through an opening in the bottom of a molten metal container (Fig.; paragraphs [0007-0008 and 0011]), a driving means for rotating the shaft(Fig. #12; paragraph [0008]), wherein in the top end of the shaft includes a gas discharge nozzle(Fig. # 18). The rotatable shaft as taught by EP'610 further comprises a seal to form a direct sealing engagement with the rotatable shaft and the container(Fig. #4 and paragraph [0008]).

However, EP'610 does not teach that the rotatable hollow shaft has a first end connected to a gas supply as claimed.

The teachings of Jewell are discussed in paragraph 6 above.

Regarding claims 12 and 22, it would have been obvious to one of ordinary skill in the art to have incorporated the connection to the gas supply as taught by Jewell into the apparatus of EP'610 in order to supply gas to the molten metal container through the drilled hole within the rotatable shaft.

10/506,594 Art Unit: 1793

Regarding claim 13, the weight of the hollow shaft, the weight of the gas distribution system at the second end of the hollow shaft and the weight of the other equipment on the shaft, such as motor and bearing, etc. read on the claimed means for urging the shaft downwardly against said seal for forming a sealing engagement with the container bottom.

## Allowable Subject Matter

- 9. Claims 14-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 10. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record either alone or in combination, does not teach or fairly suggest the claimed gas discharge impeller having a seal with the claimed structure as recited in claim 14.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lois Zheng whose telephone number is (571) 272-1248. The examiner can normally be reached on 8:30am - 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on (571) 272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
